Exchequer Tools

ExFusion Server

Fast, easy to use, ExFusion makes Advanced Exchequer integration to other business systems scalable, flexible and affordable.

Total Integration: A middle tier technology that revolutionises Exchequer data exchange with any other business system.

Utilising the ExSync engine technology, ExFusion Server enterprise software is a modular framework, using a comprehensive scheduler to initiate import and export data exchange. It provides the ability to move any Advanced Exchequer data into other backend business databases and at the same time write records and transactions back into Exchequer. Unlike other integration systems ExFusion requires and uses just **ONE** Pervasive SQL licence and **ONE** Com Toolkit licence, and requires **NO** exchequer user license.

All date/time and floating point fields are converted, getting the data into usable industry standard formats.

ExFusion Server is a standalone multi-threaded application designed as a conduit for bi-directional data flow, providing fast data access from Pervasive SQL directly through ODBC, writing into either the **Microsoft SQL Server** or **Oracle MySQL** out of the box. It has no dependencies on the Exchequer DLL for exporting data and its write back protocols are fully supported by Advanced.

It can also be customised to write to any other database system.

The robust and proven ExSync engine has the capability of moving **millions** of records an hour and is recognised as the fastest product of its kind on the market. The **only** limitation on this is the central processing unit (CPU) and memory of the host machine (Server or PC).

- Fast Synchronisation
- Accurate Data Conversion
- Replicated Exchequer Table Structure
- Simple Scheduler for Synchronisation
- Easy Interface
- Server or PC Application
- Access to All Database Fields
- Only 1 Pervasive license used
- No Exchequer License Required
- Only 1 COM Toolkit license required.
- 32bit Windows Application

Exchequer Dynamics Limited

To power our solutions we recommend **IBM** products. They provide cost effective, robust hardware with powerful performance and scalability whilst offering excellent support.
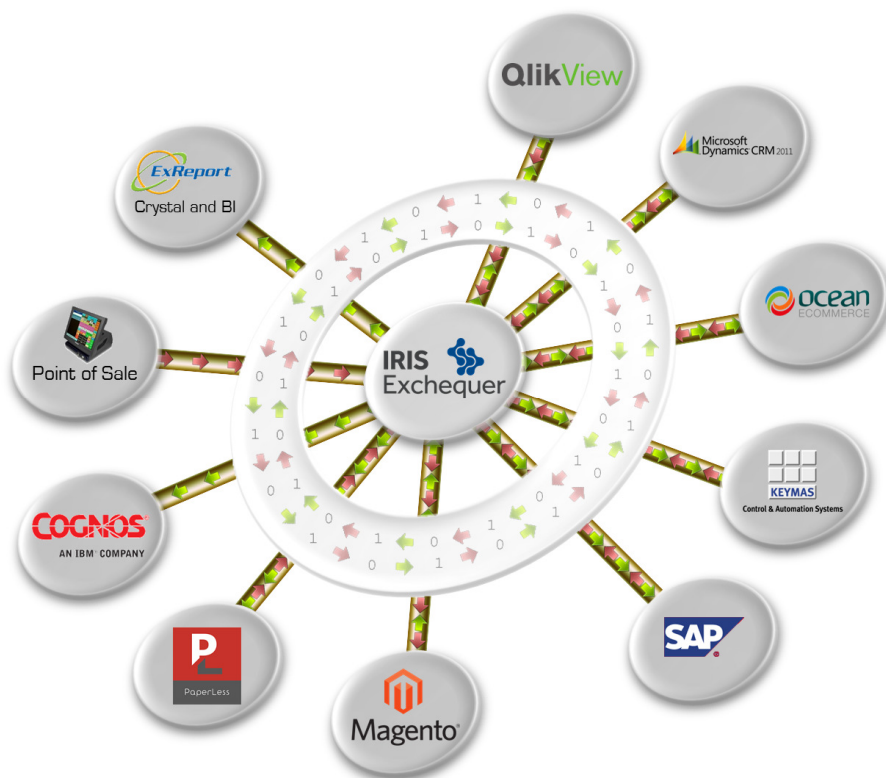

Uses to date:

Fully integrated e-commerce with orders written directly into Exchequer as sales quotations or sales orders respecting customer currency types, discount matrix and credit control.

Keymas – K-Store warehousing/picking system, used by company supplying one of the largest Supermarket chains.

Fully integrated with JAP CRM technical database and production systems.

 Current Integration Projects:

- **Integration with Paperless document management system**
- Integration with Microsoft Dynamics CRM
- Integration with Microsoft Office Outlook BCM
- Integration with IBM Cognos
- Integration with Goldmine CRM
