

# Exchequer Tools

## Tools for Exchequer reporting & integration

**Exchequer Reporting Tools** have been designed to make Advanced Exchequer reporting fast, intuitive and easy; Delivering Visual Business Intelligence reports.

**ExReport** is the client query/reporting software that connects to the data synchronised by ExSync.

It has been designed to integrate with ExSync to provide rapid reporting and broad analysis of data. ExReport can be used in isolation of ExSync if you have either a Microsoft SQL or Oracle MySQL database in place.

ExSync is only required if it is necessary to report on Exchequer data.

### Drag and Drop Report Design:

ExReport's intuitive query builder is easy to use and dynamically configures the query from the fields the user chooses.

### "One-Click" Data Refreshes:

After you have defined your data sources and structured your reports, keep your data current with a simple click of a button. All your formulae and reports instantly update.

### Report Consolidation:

Literally hundreds of spread sheets, reports, and documents can be replaced with a single **ExReport**.

### Seamless Exports:

All data can be output to Excel, CSV or PDF.

Multiple instances of the application can be run across a network.

There are two different releases of ExReport: the Standard or Pivot edition. The Pivot release contains the '**Pivot Table**' and '**Dynamic Charting**' modules. For more information, please see the respective flyer.

- No Exchequer license required
- Visual Query Building
- No SQL Skill Required
- Access All Database Fields.
- Create views not possible in Exchequer
- Powerful Grid Sorting
- Instant Calculations
- Filtering
- Grouping
- Export to Excel
- Export to CSV
